RETINAL PHOTOGRAPHY

A new, highly sophisticated, computerized camera now enables us to provide a more thorough retinal analysis of your eyes. Retinal photography assists us in documentation of retinal problems, optic nerve disease, precancerous lesions, macular degeneration, hypertensive retinopathy, diabetic retinopathy etc.

Photo-documentation is painless since nothing will touch your eye. The photographs are digitally stored and make excellent reference points from which we can make future comparisons.

We encourage all of our patients to have retinal photographs taken. Retinal Photos are **STRONGLY** recommended if:

- You have never had a retinal photo taken before
- It has been three or more years since your previous retinal photo
- You or a member of your family has diabetes, high blood pressure, glaucoma, or other health problems

There is an additional charge of \$25.00. Please check the appropriate box below and sign at the bottom.

() I do want the retinal photography.

() I do not want the retinal photography.

While retinal photography for documentation purposes represents preventative health care for some, for others, retinal photography is required because of certain eye conditions that may be present or need to be "ruled-out." In this latter case, the fee for the retinal photography may be reimbursable from Medicare or other insurance companies.
